Gym, basketball, computer games.

Profile

I'm a Android Developer. My motto is demonstrating a commitment to clean code and efficiency collaborating with team environment. My dedication to continual learning and growth as professional, positions me to excel in challenging projects and make me meanningful to any organization

Projects

I am Android developer with a focus on Kotlin programming language. I would like to share my experience and achievements in this field with you.

Over the past few months, I have been working on various mobile development projects, actively utilizing Kotlin as the primary programming language. My work has involved creating applications of varying complexity.

One of my fundamental approaches to development is not only to build efficient and functional applications but also to share my experience with the developer community. Therefore, I actively maintain my GitHub repository, where you can find various projects I have developed during my practice. In these projects, you will discover examples of using cutting-edge technologies and best practices in Android development implemented in Kotlin.

Technologies stack used: **Android Jetpack, Retrofit**
